

Notes:

Centre channel enclosures have special constraints related to available space as near the display screen as possible (generally immediately below or above). This centre is designed for minimum height and minimum depth (without introducing more complex vents). If you have other specific requirements, contact me and i'll morph the design to more closely fit your needs. For installations needing a smaller box, there is the slightly smaller cMarS Centre (not drawn as of this note) and considerably smaller Alpair6m (coming soon)

o/ designed for Mark Audio Pluvia 7hd
1/ All panels 18mm thick
2/ walls lined with 1/2" (12mm) cotton or wool felt. Centre side of holey brace lined with lower density felt or poly batting

This edge can be chamfered or rounded

make allowance for terminal cup if necessary (terminal cup should be as small as possible)
